QUINN TEST CANDIDATE - FICTIONAL TEST DATA, NOT A REAL PERSON

Email: quinn.train2.test@example.com

SUMMARY

Fictional candidate created only for staging QA of the CV Review feature.

Eight years of experience in data analysis and business intelligence.

EXPERIENCE

Data Analyst, Example Corp (2021-2025)

- Built SQL dashboards in Tableau used by more than 40 stakeholders
- Automated weekly reporting with Python, saving 6 hours per week
- Ran A/B test analysis for onboarding funnel improvements
- Partnered with product managers on KPI definitions and reporting

Business Analyst, Sample LLC (2018-2021)

- Wrote requirements and user stories for internal tools
- Analysed sales data in Excel and Power BI for regional teams
- Improved data quality checks across three source systems

SKILLS

SQL, Python, Tableau, Power BI, Excel, A/B testing, stakeholder reporting, data modelling, ETL pipelines, dashboard design, requirements gathering

EDUCATION

B.Sc. Computer Science, Example University (2014-2018)

Project Atlas - Reporting Automation (Phase 1)

Designed ETL pipelines consolidating five source systems into a nightly warehouse load. Built Tableau dashboards for 40 stakeholders. Wrote Python validation scripts that cut manual reconciliation by six hours weekly.

Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Atlas - Reporting Automation (Phase 2)

Designed ETL pipelines consolidating five source systems into a nightly warehouse load. Built Tableau dashboards for 40 stakeholders. Wrote Python validation scripts that cut manual reconciliation by six hours weekly.

Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Atlas - Reporting Automation (Phase 3)

Designed ETL pipelines consolidating five source systems into a nightly warehouse load. Built Tableau dashboards for 40 stakeholders. Wrote Python validation scripts that cut manual reconciliation by six hours weekly.

Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Atlas - Reporting Automation (Phase 4)

Designed ETL pipelines consolidating five source systems into a nightly warehouse load. Built Tableau

dashboards for 40 stakeholders. Wrote Python validation scripts that cut manual reconciliation by six hours weekly.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Atlas - Reporting Automation (Phase 5)
Designed ETL pipelines consolidating five source systems into a nightly warehouse load. Built Tableau dashboards for 40 stakeholders. Wrote Python validation scripts that cut manual reconciliation by six hours weekly.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Atlas - Reporting Automation (Phase 6)
Designed ETL pipelines consolidating five source systems into a nightly warehouse load. Built Tableau dashboards for 40 stakeholders. Wrote Python validation scripts that cut manual reconciliation by six hours weekly.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Atlas - Reporting Automation (Phase 7)
Designed ETL pipelines consolidating five source systems into a nightly warehouse load. Built Tableau dashboards for 40 stakeholders. Wrote Python validation scripts that cut manual reconciliation by six hours weekly.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Atlas - Reporting Automation (Phase 8)
Designed ETL pipelines consolidating five source systems into a nightly warehouse load. Built Tableau dashboards for 40 stakeholders. Wrote Python validation scripts that cut manual reconciliation by six hours weekly.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Atlas - Reporting Automation (Phase 9)
Designed ETL pipelines consolidating five source systems into a nightly warehouse load. Built Tableau dashboards for 40 stakeholders. Wrote Python validation scripts that cut manual reconciliation by six hours weekly.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Atlas - Reporting Automation (Phase 10)
Designed ETL pipelines consolidating five source systems into a nightly warehouse load. Built Tableau dashboards for 40 stakeholders. Wrote Python validation scripts that cut manual reconciliation by six hours weekly.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Beacon - Funnel Analysis (Phase 1)
Analysed onboarding funnel with A/B testing, identified drop-off at verification step, proposed change that lifted completion by 12 percent. Documented KPI definitions for product and engineering.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Beacon - Funnel Analysis (Phase 2)
Analysed onboarding funnel with A/B testing, identified drop-off at verification step, proposed change that lifted completion by 12 percent. Documented KPI definitions for product and engineering.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Beacon - Funnel Analysis (Phase 3)
Analysed onboarding funnel with A/B testing, identified drop-off at verification step, proposed change that lifted completion by 12 percent. Documented KPI definitions for product and engineering.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Beacon - Funnel Analysis (Phase 4)
Analysed onboarding funnel with A/B testing, identified drop-off at verification step, proposed change that lifted completion by 12 percent. Documented KPI definitions for product and engineering.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Beacon - Funnel Analysis (Phase 5)
Analysed onboarding funnel with A/B testing, identified drop-off at verification step, proposed change that lifted completion by 12 percent. Documented KPI definitions for product and engineering.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Beacon - Funnel Analysis (Phase 6)
Analysed onboarding funnel with A/B testing, identified drop-off at verification step, proposed change that lifted completion by 12 percent. Documented KPI definitions for product and engineering.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Beacon - Funnel Analysis (Phase 7)
Analysed onboarding funnel with A/B testing, identified drop-off at verification step, proposed change that lifted completion by 12 percent. Documented KPI definitions for product and engineering.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Beacon - Funnel Analysis (Phase 8)
Analysed onboarding funnel with A/B testing, identified drop-off at verification step, proposed change that lifted completion by 12 percent. Documented KPI definitions for product and engineering.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Beacon - Funnel Analysis (Phase 9)
Analysed onboarding funnel with A/B testing, identified drop-off at verification step, proposed change that lifted completion by 12 percent. Documented KPI definitions for product and engineering.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Beacon - Funnel Analysis (Phase 10)
Analysed onboarding funnel with A/B testing, identified drop-off at verification step, proposed change that lifted completion by 12 percent. Documented KPI definitions for product and engineering.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Compass - Data Quality Programme (Phase 1)
Implemented data quality checks across three source systems, tracked defect rates weekly in Power BI, and partnered with regional teams on remediation.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Compass - Data Quality Programme (Phase 2)
Implemented data quality checks across three source systems, tracked defect rates weekly in Power BI, and partnered with regional teams on remediation.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Compass - Data Quality Programme (Phase 3)
Implemented data quality checks across three source systems, tracked defect rates weekly in Power BI, and partnered with regional teams on remediation.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Compass - Data Quality Programme (Phase 4)
Implemented data quality checks across three source systems, tracked defect rates weekly in Power BI, and partnered with regional teams on remediation.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Compass - Data Quality Programme (Phase 5)
Implemented data quality checks across three source systems, tracked defect rates weekly in Power BI, and partnered with regional teams on remediation.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Compass - Data Quality Programme (Phase 6)
Implemented data quality checks across three source systems, tracked defect rates weekly in Power BI, and partnered with regional teams on remediation.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Compass - Data Quality Programme (Phase 7)
Implemented data quality checks across three source systems, tracked defect rates weekly in Power BI, and partnered with regional teams on remediation.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Compass - Data Quality Programme (Phase 8)
Implemented data quality checks across three source systems, tracked defect rates weekly in Power BI, and partnered with regional teams on remediation.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Compass - Data Quality Programme (Phase 9)
Implemented data quality checks across three source systems, tracked defect rates weekly in Power BI, and partnered with regional teams on remediation.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Compass - Data Quality Programme (Phase 10)
Implemented data quality checks across three source systems, tracked defect rates weekly in Power BI, and partnered with regional teams on remediation.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Delta - Sales Reporting (Phase 1)
Built Excel and Power BI reporting for regional sales teams, automated refresh with SQL stored procedures, and trained analysts on dashboard design standards.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Delta - Sales Reporting (Phase 2)
Built Excel and Power BI reporting for regional sales teams, automated refresh with SQL stored procedures, and trained analysts on dashboard design standards.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Delta - Sales Reporting (Phase 3)
Built Excel and Power BI reporting for regional sales teams, automated refresh with SQL stored procedures, and trained analysts on dashboard design standards.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Delta - Sales Reporting (Phase 4)
Built Excel and Power BI reporting for regional sales teams, automated refresh with SQL stored procedures, and trained analysts on dashboard design standards.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Delta - Sales Reporting (Phase 5)
Built Excel and Power BI reporting for regional sales teams, automated refresh with SQL stored procedures, and trained analysts on dashboard design standards.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Delta - Sales Reporting (Phase 6)
Built Excel and Power BI reporting for regional sales teams, automated refresh with SQL stored procedures, and trained analysts on dashboard design standards.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Delta - Sales Reporting (Phase 7)
Built Excel and Power BI reporting for regional sales teams, automated refresh with SQL stored procedures, and trained analysts on dashboard design standards.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Delta - Sales Reporting (Phase 8)
Built Excel and Power BI reporting for regional sales teams, automated refresh with SQL stored procedures, and trained analysts on dashboard design standards.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Delta - Sales Reporting (Phase 9)
Built Excel and Power BI reporting for regional sales teams, automated refresh with SQL stored procedures, and trained analysts on dashboard design standards.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Delta - Sales Reporting (Phase 10)
Built Excel and Power BI reporting for regional sales teams, automated refresh with SQL stored procedures, and trained analysts on dashboard design standards.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Ember - KPI Definition Programme (Phase 1)
Partnered with product managers on KPI definitions and reporting standards. Maintained a data dictionary for core metrics and reviewed dashboard changes for consistency.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Ember - KPI Definition Programme (Phase 2)
Partnered with product managers on KPI definitions and reporting standards. Maintained a data dictionary for core metrics and reviewed dashboard changes for consistency.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Ember - KPI Definition Programme (Phase 3)
Partnered with product managers on KPI definitions and reporting standards. Maintained a data dictionary for core metrics and reviewed dashboard changes for consistency.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Ember - KPI Definition Programme (Phase 4)
Partnered with product managers on KPI definitions and reporting standards. Maintained a data dictionary for core metrics and reviewed dashboard changes for consistency.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Ember - KPI Definition Programme (Phase 5)
Partnered with product managers on KPI definitions and reporting standards. Maintained a data dictionary for core metrics and reviewed dashboard changes for consistency.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Ember - KPI Definition Programme (Phase 6)
Partnered with product managers on KPI definitions and reporting standards. Maintained a data dictionary for core metrics and reviewed dashboard changes for consistency.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Ember - KPI Definition Programme (Phase 7)
Partnered with product managers on KPI definitions and reporting standards. Maintained a data dictionary for core metrics and reviewed dashboard changes for consistency.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Ember - KPI Definition Programme (Phase 8)
Partnered with product managers on KPI definitions and reporting standards. Maintained a data dictionary for core metrics and reviewed dashboard changes for consistency.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Ember - KPI Definition Programme (Phase 9)
Partnered with product managers on KPI definitions and reporting standards. Maintained a data dictionary for core metrics and reviewed dashboard changes for consistency.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Ember - KPI Definition Programme (Phase 10)
Partnered with product managers on KPI definitions and reporting standards. Maintained a data dictionary for core metrics and reviewed dashboard changes for consistency.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Flux - Weekly Reporting Automation (Phase 1)
Automated weekly reporting with Python, saving six hours per week. Scheduled SQL extracts, validated totals against source systems, and distributed Tableau summaries to stakeholders.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Flux - Weekly Reporting Automation (Phase 2)
Automated weekly reporting with Python, saving six hours per week. Scheduled SQL extracts, validated totals against source systems, and distributed Tableau summaries to stakeholders.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Flux - Weekly Reporting Automation (Phase 3)
Automated weekly reporting with Python, saving six hours per week. Scheduled SQL extracts, validated totals against source systems, and distributed Tableau summaries to stakeholders.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Flux - Weekly Reporting Automation (Phase 4)
Automated weekly reporting with Python, saving six hours per week. Scheduled SQL extracts, validated totals against source systems, and distributed Tableau summaries to stakeholders.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Flux - Weekly Reporting Automation (Phase 5)
Automated weekly reporting with Python, saving six hours per week. Scheduled SQL extracts, validated totals against source systems, and distributed Tableau summaries to stakeholders.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Flux - Weekly Reporting Automation (Phase 6)
Automated weekly reporting with Python, saving six hours per week. Scheduled SQL extracts, validated totals against source systems, and distributed Tableau summaries to stakeholders.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Flux - Weekly Reporting Automation (Phase 7)
Automated weekly reporting with Python, saving six hours per week. Scheduled SQL extracts, validated totals against source systems, and distributed Tableau summaries to stakeholders.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Flux - Weekly Reporting Automation (Phase 8)
Automated weekly reporting with Python, saving six hours per week. Scheduled SQL extracts, validated totals against source systems, and distributed Tableau summaries to stakeholders.
Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Flux - Weekly Reporting Automation (Phase 9)

Automated weekly reporting with Python, saving six hours per week. Scheduled SQL extracts, validated totals against source systems, and distributed Tableau summaries to stakeholders.

Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.

Project Flux - Weekly Reporting Automation (Phase 10)

Automated weekly reporting with Python, saving six hours per week. Scheduled SQL extracts, validated totals against source systems, and distributed Tableau summaries to stakeholders.

Tools: SQL, Python, Tableau, Power BI, Excel, ETL pipelines, data modelling, stakeholder reporting, requirements gathering, dashboard design.
